

Fund Description

The Equinox Campbell Strategy Fund seeks to generate attractive risk adjusted returns by combining a core allocation to trend following with smaller allocations to systematic macro and short-term strategies. The fund is diversified across approximately 100 global futures and forward markets and can be either long or short, resulting in a low long-term correlation to traditional investments.

Monthly Performance Commentary

The Equinox Campbell Strategy Fund was down in January, with sector losses led by commodities and foreign exchange offsetting gains in fixed income and equity indices. From a strategy perspective, trend following strategies were down while short-term and systematic macro were up.

From a market perspective, risk assets rebounded, encouraged by a resumption of trade talks, a shift in central bank rhetoric to a more dovish tone, and the start of US Q4 earnings that generally met expectations. In currency markets, the USD was broadly weaker on the month with the notable themes being the US government shutdown and a less hawkish FOMC. Energy markets also moved higher, with the complex rebounding from multi-year lows on the back of bullish fundamental developments and a general increase in risk sentiment.

FUND RISK DISCLOSURES

Mutual funds involve risk including possible loss of principal. There is no assurance that the Fund will achieve its investment objective. Exposure to the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Many of the derivative contracts entered into by the Fund, the Subsidiary or a trading company will be privately negotiated in the OTC market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. Credit risk refers to the possibility that the issuer of the security will not be able to make principal and interest payments when due.

Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the US or abroad. Derivative instruments come in many varieties and have a wide range of potential risks and rewards, and may include futures contracts, options on futures contracts, options, swaps, and forward currency exchange contracts.

Derivatives typically have economic leverage inherent in their terms. The use of leverage tends to exaggerate the effect of any increase or decrease in the value of the Fund's portfolio securities or other investments. Furthermore, derivative instruments and futures contracts are highly volatile and are subject to occasional rapid and substantial fluctuations. Investments in foreign securities could subject the Fund to greater risks including, currency fluctuation, economic conditions, and different governmental and accounting standards. Derivative instruments and futures contracts are highly volatile and are subject to occasional rapid and substantial fluctuations.

Investors should carefully consider the investment objectives, risks, charges and expenses of Equinox Campbell Strategy Fund. This and other important information about the Fund is contained in the Prospectus, which can be obtained by calling 1.888.643.3431. The Prospectus should be read carefully before investing. Equinox Campbell Strategy Fund is distributed by Northern Lights Distributors, LLC, Member FINRA/SIPC. Equinox Institutional Asset Management, LP, Equinox Group Distributors, LLC and Campbell & Company are not affiliated with Northern Lights Distributors, LLC.

GLOSSARY

Attribution Performance: Attribution performance of the sectors will not equate to the total return performance of the Fund. Relative performance in a particular sector due to asset allocation or stock selection over a short period is no indication or guarantee of the Fund's performance over long time horizons. The sector allocations shown may not be representative of the Fund's current or future investments and are subject to change.

Sector Allocation: Allocation for each sector is calculated using the dollar value of margin posted as collateral to support trading in each sector, as a percentage of the total dollar value of margin posted to support trading in all sectors. This chart reports sector allocation for each sector as of the previous month-end. Fund holdings and sector allocations are subject to change and are not recommendations to buy or sell any security. Current and future holdings are subject to risk.

Standard Deviation: Standard Deviation is a risk statistic used to measure the degree of variation of returns around the mean return. The Fund's annual standard deviation is calculated by multiplying the Fund's monthly standard deviation by the square root of 12.

United States Dollar Index: The U.S. Dollar Index is a leading benchmark for the international value of the U.S. dollar measuring the performance of the dollar against a basket of currencies which includes: EUR, JPY, GBP, CAD, CHF and SEK. The Index is unmanaged and not available for direct investment.
